Summary

Currently **CTO at Nevis**, leading a wealthtech platform for RIAs with rapid growth from **\$25M to \$190M** valuation. Previously **CTO at Vega**, delivering a next-generation Alt OS platform supporting **\$500B+ AUM** for Apollo and other large asset managers.

With **15+ years in software engineering** (10+ in FinTech), I specialize in **algorithmic trading, market making, and risk management** across diverse financial domains. My track record spans **hyper-scale growth** at Revolut (**\$6.5B → \$33B**), Vega (**\$10M → \$90M**), and Nevis (**\$25M → \$190M**), demonstrating ability to scale from seed to unicorn valuations.

Education & Certifications: MBA (City Business School, Moscow), **Oracle Certified Java SE 8 Programmer, Project Management Specialization** (UC Irvine), **M.S. in Computer and Information Systems Security** (PSUTI).

Team Leadership Experience:

- **Revolut:** Individual contributor to Head of Wealth & Trading Platform (24+ direct, 50+ indirect reports)
- **Vega:** From hands-on CTO to leader of 50+ person organization
- **Nevis:** Built and led 7+ engineer team from ground up

Complex Problem Solving:

- **Options pricing & derivatives** (Otkritie, Deutsche Bank): Built risk calculators and margin systems for complex financial instruments
- **Low-latency optimization** (Revolut): Achieved <60ms roundtrip for high-frequency trading infrastructure
- **Domain complexity** (Vega): Solved PE/alternative investment platform challenges with multi-GP architecture
- **Cutting-edge AI** (Nevis): Implemented RAG, semantic search, and automated meeting intelligence

My expertise spans **market making infrastructure, risk management systems, liquidity aggregation, and AI-powered automation**. I bridge **technical leadership, product strategy, and executive decision-making** to build resilient, high-scale financial infrastructure that drives measurable business impact.

Skills

Trading	Market Making, Portfolio Management, Execution, Post trade/Settlements
Risks management	SPAN, VAR/ES, Book value, DV01
Regulatory	SOC2 type 2, MiFID II, GDPR, CDD - AML/KYC, SEC/FCA, EMI, FATCA/CRS, CASS, BestEx, Market Abuse
Project Management	Agile, Scrum/Kanban, Problem solving, scope/resource/stakeholder management
Back-end	Java, Kotlin, Gradle, Spring, Netty, JUnit, Mockito, LMAX Disruptor, SBE
Transports	FIX, RSocket, Aeron, GRPC, Kafka, RabbitMQ, Google Pub/Sub, Amazon SQS, openAPI, Websocket
Cloud / DevOps	AWS (Cognito, MSK, EKS, S3, RDS), GCP, Docker, K8S, Rancher, Terraform, Vault, Ansible, GitHub Actions, TeamCity, TravisCI
Database	Postgres/TimescaleDB/Aurora RDS, Mongo, Redis, Sqlite, Flyway/Liquibase, JOOQ
Languages	Java, Kotlin, Rust, Typescript, Python, Bash, C++
Front-end	Typescript, React, HTML5, MaterialUI

Work Experience

Nevis	<i>London, UK</i>
CHIEF TECHNOLOGY OFFICER	<i>Jun 2025 — present</i>
• Leading the development of a wealthtech platform for RIAs (Registered Investment Advisors), scaling from seed to Series A with valuation growth from \$25M to \$190M • Built and led a team of 7+ engineers from ground up, establishing engineering culture and best practices for a high-growth fintech startup • Delivered comprehensive digital account opening automation with major custodians including Schwab, Fidelity, and Goldman Sachs, eliminating manual processes • Implemented AI-powered search capabilities using FTS (Full-Text Search), Semantic search, and RAG (Retrieval-Augmented Generation) for intelligent document and data discovery • Built live meeting recording and automation system with integrations between Google Calendar, Zoom, AI summarization, automatic task creation, and email distribution of meeting summaries • Developed CRM auto-filling system with household data aggregation, streamlining advisor workflows and improving client relationship management • Established scalable architecture for multi-tenant wealth management platform, supporting rapid growth and regulatory compliance requirements • Led compliance and security initiatives, completing SOC2 Type 1 and Type 2 certifications and preparing for ISO 27001 implementation • Tech stack: Modern cloud infrastructure, AI/ML pipelines, real-time data processing, API-first architecture, and comprehensive automation workflows	

Vega

London, UK

CHIEF TECHNOLOGY OFFICER

Feb 2023 — June 2025

- Served as **CTO from day one**, initially hands-on building the platform, then scaling to lead a team of **35+ top-tier engineers** and product leaders from Goldman Sachs, JPMorgan, Revolut, Amazon, and other leading firms
- Grew the company from a single engineer (myself) to a **50-person organization** (35+ engineers + product + design teams), establishing engineering culture and best practices
- Designed and implemented a scalable technology stack (AWS + Java/Spring + React/TypeScript) that **withstood two major business pivots** from B2C -> B2B2C -> B2B
- Developed an MVP in just **one week** for one of the largest alternative asset managers (**Apollo**), securing Vega's role as a strategic partner
- Led the delivery of a complex system in just **five months**, spanning seven independent workstreams with multiple integrations, to start managing **500B+ AUM** across all Apollo funds and investor types
- Drove company strategy, contributing to its growth from **10M** pre-seed valuation to **90M** at Series A, while actively engaging with Apollo's senior leadership and other key partners
- Integrated critical third-party services (KYC, onboarding, DocuSign, brokerage, fund admins) to build a fully digital wealth management platform during the B2C/B2B2C phases
- Designed core system architectures from scratch, covering financial ledger, financial planning tools, brokerage, and corporate actions handling
- Established engineering best practices including **zero-downtime** deployments (Pulumi, Github Actions, AWS MSK), **24/7 monitoring** (Grafana, OpenTelemetry, PagerDuty), **high test coverage** (84.5% backend, 48.08% frontend)
- Accelerated release cycles to **211 deployments per week**, maintaining high development velocity (**40K+** lines of code added)
- Implemented clear team KPIs and quarterly performance reviews, tracking contributions across **culture, delivery, and skills growth** dimensions
- Drove innovation with AI-powered engineering tools (Cursor, Github Copilot) to automate test creation and improve contract-first API development
- Designed a zero-trust security architecture (AWS VPC, site-to-site VPN), achieving high pentesting scores (only 3 minor issues) and securing **SOC2 type 1** certification (Type 2 ongoing)
- Tech stack: **Pulumi (Go) for IaC**, AWS (Cognito, MSK, EKS, S3, RDS), Java 21, Spring Boot, TypeScript/React/Tailwind UI, Flyway/JOOQ/Postgres, **OpenAPI contract first**, Kafka with **Avro** schema

Revolut

London, UK

HEAD OF TRADING PLATFORM ENGINEERING

Feb 2020 — May 2023

- Led the **Platform Tribe** of **24+ engineers** across multiple teams: execution, exchange, market making, market data, and retail stock trading.
- Expanded asset coverage by integrating with crypto exchanges, banks, and brokerage firms adding **+50 crypto** tokens and **+7 fiat** currencies.)
- Designed and built a portfolio management system from scratch for the treasury department, handling **\$650M+ AUM** across fixed income, FX/IR derivatives, and spot markets (FX, crypto, commodities).
- Developed a **greenfield risk management system**, covering Mark-to-Market (MtM), Collateral & VM, VAR/ES, DV01, Greeks, Book Value and Accrual calculations.
- Architected and led development of liquidity aggregation services, including **Smart order routing (SOR)**, execution connectors, hedging algorithms (**<60ms roundtrip**), and a high-performance matching engine
- Launched brokerage operations in **Australia, Singapore, and the US** while migrating the EU market to a new legal entity
- Transitioned from a fully disclosed to an **omnibus brokerage model**, enabling EU market expansion via **Upvest**
- Tech stack: GCP, K8S, Java 17+, RSocket, gRPC, TypeScript/React UI, QuickFIX, QuantLib, LMAX Disruptor, Aeron, Google Pub/Sub, Redis, Postgres, TimescaleDB

Deutsche Bank

Moscow, Russia

TEAM LEAD & SOFTWARE ENGINEER (AVP)

Jan 2019 — Feb 2020

- Led a team of 3 engineers to expand FX desk risk calculator to new asset class - Fixed income.
- Presented the project to the multiple Management Directors across the organisation
- Facilitated the migration from excel based solution to web based risk calculator
- Contributed into backend development to connect multiple systems to our new platform
- Tech stack: Java 11+, Spring, GRPC, C++, Tibco, Solace PubSub, MongoDB

Otkritie Broker

Moscow, Russia

HEAD OF DEVELOPMENT DIVISION & SOFTWARE ENGINEER

Sep 2016 — Jan 2019

- Managed team of 10 engineering experts in low latency and high frequency trading.
- Developed solution to manage structured products (autocallable)
- Developed derivative calculator (VM, options greeks, IV, volatility smile) and margin calculators for Moscow exchange instruments (MOEX)
- Scaled the risk engine to support over 1M updates per second, servicing more than 400k retail investors with derivative portfolios (SPAN) (futures/options at index/commodity/fx/stocks)
- Tech stack: Java 11+, Spring, LMAX Disruptor, SBE, OneNio, FIX, RabbitMQ, Mongo, Docker, Rancher

GeekBrains University

Moscow, Russia

JAVA TEACHER (REMOTE / PART TIME)

Jun 2017 — Sep 2019

- Tutor at course: Architecture and design patterns on Java (GoF, MVC, Three-tier etc)
- Tutor at course: Professional Java (generics/jdbc/concurrency/j.u.c/developer tools/reflection/annotations)
- Tutor at course: Intermediate Java (OOP/exceptions/collections/Swing/Concurrency/network)
- Tutor at course: Basic Java (variables/loops/conditions/switch operator/OOP/Swing/etc)

Various companies

Worldwide

SOFTWARE DEVELOPER

Oct 2010 — Sep 2016

- Multiple backend projects in Java and C++
- Infrastructure and observability projects with on-prem and GCP cloud
- Frontend projects with Qt, Angular 1 and TypeScript
- Few voice recognition and chatbot projects with CMU Sphinx
